DESCRIPTION

The Krohn-Hite Model 3382 Dual Channel Filter provides ease of operation and the reliability Krohn-Hite has been known for since 1949; along with a price that will fit any budget.

The 3382 two independent channels provide a tunable frequency range from 0.1Hz to 200kHz; and with the 002 option, the range is extended to 0.005Hz. The frequency response characteristic is selectable to either maximally flat (Butterworth) for clean filtering in the frequency domain, or linear phase (Bessel) for complex filtering.

Each channel of the 3382, offers selectable functions of low-pass and high-pass 8-pole filtering with selectable input gains to 50dB in 10dB steps, and output gains to 20dB selectable in 0.1dB steps. The 3382 will accept input signals to $\pm 10V$ peak at 0dB gain and has selectable ac or dc coupling. Memory is available for storing a set-up of the instrument which can be recalled with a simple command.

BAND-PASS/BAND/REJECT OPERATION

With the Model 3382 the user can simply connect two channels in series to achieve band-pass operation or connect the two in summed parallel for band-reject operation.

APPLICATIONS

Applications of the Model 3382 are anti-aliasing, ultra-sound measurements, random noise testing, sound recording, suppressing interference in audio communications and related fields of medical, geological, geophysical, oceanographic, military and many more.
